Claims

1. Operable device 11, 12, 13,

    that contains a operating panel 14 through which a user can produce and/or change
    the existing operating states of the device 11, 12, 13,

5   characterized in that there is a decision unit 15 present which blocks or releases
    certain operating states of the operable device 11, 12, 13 based on received data.

2. Operable device according to Claim 1, characterized in that the operable
    device 11, 12, 13 is suitable for receiving and/or transmitting data.

3. Operable device according to Claim 1 or Claim 2, characterized in that there
10 is equipment 17 present that collects information on the conditions and/or states
    under which or in which the operable device 11, 12, 13 is currently being operated,
    and that transmits the information as data to the decision unit 15.

4. Operable device according to Claims 1 through 3, characterized in that there
    is a receiving unit 20 present and that the data received by the receiving unit 20 is
15 also transmitted to the decision unit 15 to be used alone or together with other data
    to block or release certain operating states of the operable devices 11, 12, 13.
